DETAILED ACTION

A reference to any prior application to which applicant is claiming priority must be inserted as the first sentence of the specification.

The response to election/restriction filed on April 23, 2007, has been received. Applicant's election without traverse of group I claims 14-20 and 27-32 in the reply is acknowledged.

Claims 14-20 and 27-32 are pending in this application and were examined on their merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-20 and 27- 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Reed et al. (Proc. Natl. Acad. Sci. USA, 1997, Vol. 94, p. 13885-13890).

Claims 14-20 and 27-32 are drawn to a method for cell culture which continuously controls dynamic conditions by application of hydrostatic pressure on a culture liquid in an atmospheric air condition or a gaseous atmosphere condition for culturing cells by centrifugal force, thereby giving stimulation to the cells the hydrostatic

pressure to the cells is periodically changed or maintained for a certain period of time by application of centrifugal force, cells are cultured together with various kinds of biomaterials, controlling the number of rotations, the number of rotations within a range from 10-25,000 rpm, pressure is applied within a range from 0.5 sec to 6 weeks.

Reed et al. discloses a method for cell culture by application of hydrostatic pressure on a culture liquid in an atmospheric air condition or a gaseous atmosphere condition for culturing cells by centrifugal, giving stimulation to the cells by application of centrifugal force, cells are cultured together with various kinds of biomaterials, controlling the number of rotations, the number of rotations within a range from 10-25,000 rpm force (see Materials & Methods p. 13885, column 2, lines 29-39), hydrostatic pressure is in the range of 60Mpa or less (p.13888, column 2 lines 9-10), pressure is applied within a range from 0.5 to 6 weeks (p. 13885, column 1, 3rd paragraph, lines 4-6).

Reed et al. therefore clearly anticipated the claimed invention.

Conclusion

No claims are allowed.
